

## Lab 21

```
1  #include <stdio.h>
2  main()
3  {
4
5      int postCode = 1;
6      char con = 'y';
7
8      while (con == 'y')
9      {
10         printf("Enter Postcode : ");
11         scanf("%d", &postCode);
12
13         if (postCode == 10120)
14         {
15             printf("\n\"Donmaung, Bangkok\" \n\n");
16         }
17
18         else if (postCode == 50180)
19         {
20             printf("\n\"Mae Rim, Chiang Mai\" \n\n");
21         }
22
23         else if (postCode == 12110)
24         {
25             printf("\n\"Thanyaburi, Pathum Thani\" \n\n");
26         }
27
28         else if (postCode == 65000)
```

```
29         {
30             printf("\n\"Maung Phitsanulok, Phitsanulok\" \n\n");
31         }
32     else if (postCode == 58110)
33     {
34         printf("\n\"Sop Moei, Mae Hong Son\" \n\n");
35     }
36
37     else
38     {
39         printf("\n\"No Have Infomation For This Post Code\" \n \" Please enter
40 again \"\n\n");
41     }
42     while (postCode > 0)
43     {
44         printf("Continue Program ? (y/N): ");
45         scanf(" %c", &con);
46         printf("\n");
47         if (con == 'y' || con == 'N')
48         {
49             postCode = 0;
50         }
51         else
52         {
53             printf("Enter 'y' or 'N' only\n");
54             postCode = 1;
55         }
56     }
57
58     if (con == 'N')
```

```
59         {
60             printf("\n\"End Program\"\n\n");
61             break;
62         }
63     }
64 }
```
